## **Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

1-79. (Cancelled)

80. (Previously Presented) A method of eliciting protective antibodies specific to group A streptococcal polysaccharide in a mammal comprising administering to a mammal a polysaccharide-protein conjugate or polysaccharide-protein fragment conjugate comprising a polysaccharide component and a protein or protein fragment component, wherein the polysaccharide component of said conjugate is of formula (I)

[→2)-
$$\alpha$$
-L-Rhap-(1→3)- $\alpha$ -L-Rhap-(1→]<sub>n</sub>-R

3

↑

1

 $\beta$ -D-GlepNAc

(I)

wherein R is a terminal reducing L-rhamnose or D-GlcpNAc and n is a number from 3 to 50, and wherein said polysaccharide component is covalently bound to the protein component or protein fragment component of said conjugate.

- 81. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 80, wherein the mammal is a human.
- 82. (Cancelled)
- 83. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 80, wherein n is 3 to 30.
- 84: (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 81, wherein the polysaccharide component has a molecular weight of about 10 kilodaltons.

Serial No. 09/207,188 Amdt. dated March 17, 2004 Reply to Advisory Action of Nov. 5, 2003

- 85. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 81, wherein the protein component is bound to the polysaccharide component through a secondary amine bond.
- 86. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 85, wherein the protein component is any native or recombinant bacterial protein.
- 87. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 86, wherein the protein component is selected from the group consisting of tetanus toxoid, cholera toxin, diphtheria toxoid, and  $CRM_{197}$ .
- 88. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 87, wherein the protein component is tetanus toxoid.
- 89. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 81, wherein the conjugate is administered with a carrier selected from the group consisting of saline, Ringer's solution and phosphate buffered saline.
- 90. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 81, wherein the conjugate is administered with an adjuvant.
- 91. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 90, wherein the adjuvant is selected from the group consisting of aluminum hydroxide, aluminum phosphate, monophosphoryl lipid A, QS21 and stearyl tyrosine.
- 92. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 81, wherein the human is a child.

93. (Previously Presented) The method of eliciting protective antibodies specific to group A streptococcal polysaccharide according to claim 81, wherein the conjugate is administered in a dosage amount of about 0.1 µg to about 10 µg per kilogram of body weight.
